

Case Study

Medical Society of London

Services Provided:

- Accessibility for disabled persons to the function rooms and other facilities
- Onsite training and delivery
- Ongoing support & maintenance

Background

The Medical Society of London is the oldest surviving medical society in this country - possibly in the world. It was founded in 1773 by the Quaker physician and philanthropist Dr John Coakley Lettsom for physicians, surgeons and apothecaries who met to exchange medical news and confer about difficult cases. The Society's wide appeal, the possession of a valuable library and freehold property ensured its success and longevity.

Originally based in the City, the Medical Society moved to its present house in 1873. Situated at the heart of London's medical community, the Society organises a stimulating programme of lectures and social activities while providing a home for other societies.

Objectives

- The objective was to implement a Stairmatic Mobile Stair climber
- Increase visitor rate with this stair access solution
- Provide easy operation for staff to enable disabled persons to visit the Function rooms and other facilities
- Provide an easy to use solution, encouraging regular visits from customers
- Provide a comfortable solution for customers to go up & down stairs in a safe and dignified Manner
- Offer regular maintenance and training programs

Solution

The Solution was to implement a Stairmatic Mobile Stair climber due to the long sweeping fan on the stairs. The Stairmatic Mobile Stair climber was fully supplied by Baronmead which included a 1 year service contract, delivery and training for up to 8 staff.
